-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE <u>3</u> MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.
- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

1)☒ Responsive to communication(s) filed on <u>24 May 2006</u>.

2a)☒ This action is **FINAL.**   2b)☐ This action is non-final.

3)☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

4)☒ Claim(s) *1-3 and 5-32* is/are pending in the application.

    4a) Of the above claim(s) _____ is/are withdrawn from consideration.

5)☐ Claim(s) _____ is/are allowed.

6)☒ Claim(s) *1-3 and 5-32* is/are rejected.

7)☐ Claim(s) _____ is/are objected to.

8)☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

9)☐ The specification is objected to by the Examiner.

10)☐ The drawing(s) filed on _____ is/are: a)☐ accepted or b)☐ objected to by the Examiner.

    Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).

    Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).

11)☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

12)☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).

    a)☐ All b)☐ Some * c)☐ None of:

      1.☐ Certified copies of the priority documents have been received.

      2.☐ Certified copies of the priority documents have been received in Application No. _____.

      3.☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

    * See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

1)☐ Notice of References Cited (PTO-892)

2)☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)

3)☐ Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08)
    Paper No(s)/Mail Date _____.

4)☐ Interview Summary (PTO-413)
    Paper No(s)/Mail Date. _____.

5)☐ Notice of Informal Patent Application (PTO-152)

6)☐ Other: _____.

DETAILED ACTION

This action is responsive to the Amendment filed on 5/24/2006.

Any objections and rejections from the prior correspondence not restated in this

communication is/are withdrawn.

Claim Objections

Claims 15 and 22 are objected to because of the following informalities: Claims

15 and 22 are depends from the cancelled claim 4. Appropriate correction is required.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that

form the basis for the rejections under this section made in this Office action:

> A person shall be entitled to a patent unless –
>
> (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

1.   Claims 1-3, 6, 9, 11-15, 17-22, 24-26, and 28 are rejected under 35

U.S.C. 102(e) as being anticipated by See el al. (US Patent 6,839,823 B1), hereinafter

simply See.

Regarding claims 1, 12, and 19, See teaches a flash memory data structure,

comprising:

fixed length cells, each having:

a control and identifier section for containing a unique identifier (Fig. 3, Identifier

302; column 4, lines 8-13) and a cell count for logically associating multiple of said fixed

length cells (Fig. 3, Size 308; column 4, lines 8-23), and

a data section for containing only a configuration value pertaining to said unique

identifier (Fig. 1, Data 114; column 3, lines 11-60) for a flash memory controller (Fig. 21,

Micro-controller 2102; column 15, lines 25-50) and flash memory (Fig. 21, Flash

Memory 2104; column 15, lines 25-50).

Regarding claims 2, 13, and 20, See teaches a data structure wherein said

unique identifier is one byte long (column 8, lines 35-36) for a flash memory controller

(Fig. 21, Micro-controller 2102; column 15, lines 25-50) and flash memory (Fig. 21,

Flash Memory 2104; column 15, lines 25-50). '

Regarding claims 3, 14, and 21, See teaches a data structure wherein one of

said fixed length cells equals a minimum storage space for said configuration value

(column 3, lines 38-46; column 15, lines 44-46) for a flash memory controller (Fig. 21,

Micro-controller 2102; column 15, lines 25-50) and flash memory (Fig. 21, Flash

Memory 2104; column 15, lines 25-50).

Regarding claims 6, 17, and 24, See teaches a data structure wherein said data

section is located at an end of said fixed length cells (Fig. 2, column 3, lines 36-54).

Regarding claim 9, See teaches a data structure wherein said unique identifier corresponds a configuration parameter in a lookup table (column 3, lines 8-19).

Regarding claims 11, 18 and 25, See teaches a data structure wherein said control and identifier section is configurable such that said unique identifier and said cell count are located in subsequent bytes at the beginning of said control and identifier section (Fig. 2, column 3, lines 36-54; column 5, lines 44-67) for a flash memory controller (Fig. 21, Micro-controller 2102; column 15, lines 25-50) and flash memory (Fig. 21, Flash Memory 2104; column 15, lines 25-50).

Regarding claims 15 and 22, See teaches a flash memory controller (Fig. 21, Micro-controller 2102; column 15, lines 25-50) and flash memory (Fig. 21, Flash Memory 2104; column 15, lines 25-50).

Regarding claim 26, See teaches a method of writing to flash memory with fixed length cells, comprising:

locating a first of said fixed length cells that is free (Fig. 10, Step 1020; column 10, lines 2-4);

writing a unique identifier in a control and identifier section of said first free fixed length cell (Fig. 3, Identifier 302; column 4, lines 8-13);

writing a configuration value pertaining to said unique identifier in a data section

of said first free fixed length cell (Fig. 1, Data 114; column 3, lines 11-60); and

updating a cell count in said control and identifier section to represent a number

of said fixed length cells logically associated (Fig. 3; Size 308; column 4, lines 9-23).

Regarding claim 28, See teaches a method including searching said flash

memory for a pre-existing configuration value having said unique identifier and marking

said pre-existing configuration value as deleted (column 15, lines 14-18).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all

obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set
forth in section 102 of this title, if the differences between the subject matter sought to be patented and
the prior art are such that the subject matter as a whole would have been obvious at the time the
invention was made to a person having ordinary skill in the art to which said subject matter pertains.
Patentability shall not be negatived by the manner in which the invention was made.

The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148

USPQ 459 (1966), that are applied for establishing a background for determining

obviousness under 35 U.S.C. 103(a) are summarized as follows:

1.   Determining the scope and contents of the prior art.
2.   Ascertaining the differences between the prior art and the claims at issue.
3.   Resolving the level of ordinary skill in the pertinent art.
4.   Considering objective evidence present in the application indicating
      obviousness or nonobviousness.

2.   Claims 5, 7-8, 10, 16, and 23 are rejected under 35 U.S.C. 103(a) as being

unpatentable over See el al. (US Patent 6,839,823 B1) in view of Cho et al. (US Patent

5,835,950), hereinafter simply Cho.

        Regarding claims 5, 16 and 23, See teaches a flash memory data structure,

comprising:

        (a) a disk (column 4, lines 55-56; FIG.1, element 108);

    fixed length cells, each having:

        a control and identifier section for containing a unique identifier (Fig. 3, Identifier

302; column 4, lines 8-13) and a cell count for logically associating multiple of said fixed

length cells (Fig. 3; Size 308; column 4, lines 9-23), and

        a data section for containing only a configuration value pertaining to said unique

identifier (Fig. 1, Data 114; column 3, lines 11-60) for a flash memory controller (Fig. 21,

Micro-controller 2102; column 15, lines 25-50) and flash memory (Fig. 21, Flash

Memory 2104; column 15, lines 25-50).

        See fails to teach the fixed length cells are 32 bytes long. Cho teaches a block

size of 32 bytes (column 6, lines 53-55, column 8, lines 29-30).

        At the time of invention it would have been obvious to a person of ordinary skill in

the art to combine the See with Cho. The motivation for doing so would be to support

the 32 bytes length cell that is commonly used to the See's invention (column 6, lines

53-55, column 8, lines 29-30).

Regarding claims 7 and 8, See teaches a flash memory data structure,

comprising;

fixed length cells, each having:

a control and identifier section for containing a unique identifier (Fig. 3, Identifier

302; column 4, lines 8-13) and a cell count for logically associating multiple of said fixed

length cells (Fig. 3; Size 308; column 4, lines 9-23), and

a data section for containing only a configuration value pertaining to said unique

identifier (Fig. 1, Data 114; column 3, lines 11-60) for a flash memory controller (Fig. 21,

Micro-controller 2102; column 15, lines 25-50) and flash memory (Fig. 21, Flash

Memory 2104; column 15, lines 25-50).

See fails to teach using programming macro when configure a size of the data

structure. Cho teaches macro program to do the functions (column 7, lines 47-49).

At the time of invention it would have been obvious to a person of ordinary skill in

the art to combine the See with Cho. The motivation for doing so would have been an

automation of configuring a length of the fixed cells by using Cho's macro program.

Regarding claim 10, it is clear that multiples of the identifier correspond to many

configuration parameters such as 254 or any number.

3.   Claims 27 and 29-32 are rejected under 35 U.S.C. 103(a) as being unpatentable

over See el al. (US Patent 6,839,823 B1) in view of Lee et al. (US Patent 5,870,520),

hereinafter simply Lee.

Regarding claim 27, See teaches a method of writing to flash memory with fixed

length cells, comprising:

locating a first of said fixed length cells that is free (Fig. 10, Step 1020; column

10, lines 2-4);

writing a unique identifier in a control and identifier section of said first free fixed

length cell (Fig. 3, Identifier 302; column 4, lines 8-13);

writing a configuration value pertaining to said unique identifier in a data section

of said first free fixed length cell (Fig. 1, Data 114; column 3, lines 11-60); and

updating a cell count in said control and identifier section to represent a number

of said fixed length cells logically associated (Fig. 3, Size 308; column 4, lines 9-23).

See fails to teach updating a checksum of the configuration value. Lee teaches a

checksum to determine validity (column 3, lines 32-33; column 5, lines 3-16).

At the time of invention it would have been obvious to a person of ordinary skill in

the art to combine the See with Lee. The motivation for doing so would have been an

error checking of configuration value by utilizing Lee's checksum method. It would

validate the configuration value for any possible errors.

Regarding claim 29, See combined with Lee teaches a method including

updating a global variable during system initialization (Lee, column 6, lines 10-14) with

an address of a first of said fixed length cells that is free (See, column 10, lines 2-4).

Regarding claim 30, Lee teaches a method further including testing said

configuration value to determine completeness (column 11, lines 37-40).

Regarding claim 31, See combined with Lee teach a method including

updating said cell count (See, Fig. 3; Size 308; column 4, lines 9-23; column 5,

lines 13-46) and marking said configuration value as deleted when determining said

configuration value is not complete (See, column 15, lines 14-18); and

updating said cell count (Fig. 3; Size 308; column 4, lines 9-23; column 5, lines

13-46) and a checksum of said configuration value when determining said configuration

value is complete (Lee, column 3, lines 32-39; column 5, lines 3-16).

Regarding claim 32, Lee teaches a method including validating checksums of

each of said fixed length cells (column 3, lines 32-39; column 5, lines 3-16).

Response to Arguments

Applicant's arguments filed 5/24/06 have been fully considered but they are not persuasive.

<u>Claims 1, 12, and 19</u>

Regarding claims 1, 12, and 19, Applicant argues that See does not teach a cell count.

In response, it is noted that paragraph 25 of Applicant's specification said "The cell count enables the configuration value to have a size that is not constrain by a size of the fixed length cells". See teaches equivalent limitations, which are called SIZE (Fig. 3, SIZE 306; column 4, lines 9-23) and TYPE (Fig. 3, TYPE 306; column 4, lines 28-36).

Applicant also argues that See does not teach a data section for containing only a configuration values pertaining to said unique identifier.

In response, it is noted that Fig. 2 shows how data is identified and stored within one of the individual blocks allocated to the data storage portion (column 3, lines 36-60).

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time

policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE

MONTHS from the mailing date of this action. In the event a first reply is filed within

TWO MONTHS of the mailing date of this final action and the advisory action is not

mailed until after the end of the THREE-MONTH shortened statutory period, then the

shortened statutory period will expire on the date the advisory action is mailed, and any

extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of

the advisory action. In no event, however, will the statutory period for reply expire later

than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the

examiner should be directed to Daniel B. Ko whose telephone number is 571-272-8194.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, Reginald G. Bragdon can be reached on 571-272-4204. The fax phone

number for the organization where this application or proceeding is assigned is 703-

273-8300.

Information regarding the status of an application may be obtained from the

Patent Application Information Retrieval (PAIR) system. Status information for

published applications may be obtained from either Private PAIR or Public PAIR.

Status information for unpublished applications is available through Private PAIR only.

For more information about the PAIR system, see http://pair-direct.uspto.gov. Should

you have questions on access to the Private PAIR system, contact the Electronic

Business Center (EBC) at 866-217-9197 (toll-free).
